

Test-5

- 1) Explain uses of ping command in network?
A) It is a troubleshooting basic command to check network is live or not between devices.
- 2) Explain Netbios Protocol?
A) Instead of Ip address we can use system names to get services.
ex:- 133.0.0.10 (PC-A)
we call it as \\PC-A/Users/user/Desktop
- 3) Explain SMB Protocol?
A) Server message block protocol is used for folder sharing, sharing files, ... between computers, Most used in Windows.
- 4) Explain Ping process from 50.0.0.10 to 50.0.0.20?
A) 1) Open Run and enter NCPA.cpl and assign Ip address to PC A (50.0.0.10)
2) Open Run in system 2 and enter NCPA.cpl and assign Ip address to system 2 (50.0.0.20)
3) Open PC A Command prompt and give command
ping 50.0.0.20
If request sent 4 times & Received request 4 times means Ping process completed successfully.
